Racechrono pro tutorial

Although RaceChrono can't connect to GoPro GPS during live recording, you can later import the data embedded in your video files. You will only need a GoPro that has ... Link and sync the video file with the other camera just as you would normally. Then on the video list screen, for each pip file, change the video ... The configuration of the GoPro remote control function has changed quite a bit for RaceChrono v6.2.1, and this tutorial only applies to this or that newer version. In most parts of this tutorial ... This tutorial explains how to combine external camera videos with a session and how to customize the synchronization of already linked video files. Step 1: Copy the video ... RaceChrono Pro supports combining video files with sessions from virtually any external camera, as long as the video file format is supported by the phone. You can create ... RaceChrono offers several APIs that you can use to connect your own devices and enter data. DIY devices are configured with RaceChrono Settings > > Add other ... Over the past few years, Android phone manufacturers have been focusing on improving the battery life of their phones. As a result, most new phones restrict third-party app access to ... RaceChrono v6.0 and later features a new data backup feature. This feature allows users to quickly back up content, as well as easily transfer data to a new phone. Create ... Here's a tutorial on a simple case of exporting a video file with superimposed data that you can view on your desktop or upload to YouTube, etc. Open the session and ... Here's a quick guide on how to use RaceChrono Pro and a built-in camera to record videos. A sample session here runs with the device in landscape orientation for simplicity ... This tutorial explains how to combine external camera videos with a session and how to customize the synchronization of already linked video files. Step 1: Copy the videos to your first thing you need to do is copy the videos to your phone or tablet. Go to a separate tutorial for instructions. If you just want to adjust the sync of already linked videos, you can skip this step. Step 2: Select a video file to connect or adjust the Next sync, open the video list screen by pressing the round light blue button on the session overview screen. On your iPhone and iPad, the videos you copied to your phone in step 1 will appear in the Photos app folder. On Android devices, copied videos will be displayed in the Internal Storage and/or External Storage folder. Select the video you want to link to the session. If you want to customize the sync of an existing video file, select the video from the Linked Videos folder. Step 3: Sync the video by selecting the video in step 2 will open the Analytics screen. Compared to normal analysis, this screen has an additional Link button in the video control. Video. will open by pressing the Link button. The tools will look slightly different depending on whether the sync is locked (the file is linked) or unlocked (the file is disconnected). You can change the locked/unlocked status by pressing the lock symbol button. After unlocking synchronization (the file is disconnected), you can independently move the video position and chart position. When you press the lock button, the video position and chart position will start to move in unchefully, which means that the sync is locked (and the video file is then connected). In general, use unlocked mode to find a rough sync point, then lock the sync and use the -50ms and +50ms buttons to fine-tune the sync. Bonus Step A: Automatic Sync RaceChrono v6.0 (and later) has an automatic video sync feature that can be used for video files recorded with GoPro and Garmin VIRB with the camera's built-in GPS enabled. When the file is not yet connected, the sync tools will have an additional button with a search icon. If you tap this button, RaceChrono will automatically try to sync the video file using the built-in GPS data. This will also block video synchronization. Note that you may need to slightly adjust the sync with the -50 and +50 ms buttons, as this will only sync Garmin VIRB files with the nearest second. If you don't turn on the auto-sync video button, there may be several reasons why no GPS data is recorded in your video files. Either the gps camera has been turned off, or you don't get the right lock for satellites when recording. The time stamps of the recorded GPS data are not within the range to which it belongs to the session. Make sure you're trying to sync the correct videos to the correct session. And if you have resumed the session, make sure that you have selected the correct Session Resume / Session before trying to synchronize the video files. Bonus Step B: Combine chapter files All action cameras divide recordings into multiple files to limit the file size of a single file. These files are called chapter files. In RaceChrono, you only need to manually sync the first file, and the rest of them can be synchronized by combining them after the previous file. RaceChrono will search for GoPro chapters and link them automatically after the first linked file. For chapter files of other cameras, you can use Link after... functions that can be found in the context menus of each unconnected file. Bonus step C: Video tutorial The following video tutorial is for the older version, v3.20, but the main rules and components of the user interface are still the same, in addition to the video list. The video gives you a bit more information about syncing. And here's a ready-made exported video from this tutorial. Please note that the only software used to this video was RaceChrono Pro! The video that you record yourself is recorded GoPro3+ black edition with 720p setting. It was supposed to be a 24-hour race, so the 720p setting was going to make the memory cards last longer. 2014. reptile 28. plkst jüljüs. 19:42 · Here's a tutorial on how to use RaceChrono Pro v3.20 new feature to combine video files from external cameras such as GoPro. Here's a tutorial on how to add videos from external cameras (such as GoPro) to RaceChrono Pro. Note that it is important that your phone or tablet is able to ...
